

SAFETY TIP OF THE WEEK

ZERO HARM

Electrical Cord Safety Inspection

Protect flexible cords and cables from physical damage.

Check cords for cut, broken, or cracked insulation.

Keep slack in flexible cords to prevent tension on electrical terminals.

Extension cords are for temporary use. Install permanent wiring when use is no longer temporary.

Verify that all three-wire tools and equipment are grounded.

Have you completed your third quarter electrical cord inspections?

What's your Safety Color for this quarter? Examples below may not match your quarterly color selection. That's ok.

First

Red

Second

Green

Third

Blue

Fourth

Orange

Does your team know what the colors mean when they see them on electrical cords, tools and equipment? Post your quarterly colors on your safety bulletin board. Test your team frequently. I will...
